RAMSHARAN YADAV

Senior PHP / Laravel Software Developer | Backend & Full Stack (Immediate Joiner)

+917737291210 | ramsharanyadav1992@gmail.com | Gurugram | Open to Relocate | Open to On-Site | LinkedIn | GitHub

SUMMARY

Senior Software Engineer with 7+ years of experience in PHP and Laravel backend and full-stack development. Architected and scaled multi-gateway payment and subscription platforms handling 10M+ transactions/month. Strong in RESTful APIs, microservices, MySQL/PostgreSQL optimization, Redis caching, queues, secure API development, unit testing (PHPUnit), Docker, AWS, and CI/CD. Follows SOLID principles, design patterns, and clean-code practices to deliver production-ready fintech and SaaS systems.

SKILLS

Backend: PHP 7.x/8.x, Laravel 8–12, Core PHP, CodeIgniter, OOP, MVC, REST APIs, Microservices, Event-Driven Architecture, System Design
Architecture & Patterns: SOLID, Design Patterns, Repository-Service Pattern, API Versioning, Swagger / OpenAPI, Laravel Octane
Frontend & Full Stack: JavaScript (ES6+), TypeScript, Node.js, Angular, React.js, Vue.js, HTML5, CSS3, AJAX
Databases: MySQL, PostgreSQL, Redis (Caching), SQL, Query Optimization, Composite Indexing, ACID Transactions, Partitioning
Testing & Quality: Unit Testing, PHPUnit, TDD, Code Review, Postman
DevOps & Cloud: AWS, Docker, CI/CD, GitHub Actions, Git, Linux/Ubuntu, Nginx, Queues/Workers, Cron, CDN, Agile / Scrum
Security & Fintech: Authentication, Authorization, OAuth2, JWT, RBAC, Encryption, Webhook Validation, Audit Trails, Payment Gateway Integration, Wallet Systems, Reconciliation
AI Tools: ChatGPT, Claude AI, Grok, Perplexity

WORK EXPERIENCE

Senior Software Engineer (PHP / Laravel) Mar '26 — Aug '26
11Axis.com Ahmedabad, India

- Architected an end-to-end subscription lifecycle engine in Laravel covering activation, renewal, suspension, cancellation, prorated upgrades, and grace-period state transitions.
- Integrated multiple third-party billing providers with diverse subscription flows, APIs, and callbacks/webhooks, including payload verification, retry logic, and event deduplication.
- Developed subscription reporting, analytics, reconciliation, and renewal automation systems to support business operations and decision-making.
- Planned and executed legacy data migrations, including database records, digital assets, and user uploads, ensuring seamless transfer to CDN and new platform infrastructure.

Senior Software Engineer (PHP / Laravel) Nov '23 — Feb '26
Payworld Digital Services Pvt Ltd Gurugram, India

- Developed and maintained scalable backend fintech systems for payments, digital wallets, and money remittance, supporting 10M+ transactions/month using microservices-oriented architecture.
- Designed and implemented secure RESTful APIs in Laravel for payment initiation, status re-query, webhooks, commission calculation, settlement workflows, and reconciliation, with API integration and versioning.
- Optimized MySQL performance through composite indexing, query refactoring, transaction management, and asynchronous processing using queue jobs and cron, resulting in 25% faster API response times.
- Implemented security and compliance best practices including authentication, authorization, request validation, encryption, logging, monitoring, and audit trails, resulting in zero critical security incidents in production.
- Integrated 15+ payment gateways and service providers using modular, reusable service adapters, improving system reliability, scalability, and fault tolerance by 35%.
- Collaborated cross-functionally on system design, code reviews, and CI/CD pipelines.

Software Engineer (Backend – PHP) Apr '22 — Nov '23
MCSAM Pvt Ltd Gurugram, India

- Designed and implemented 25+ payment gateway integrations supporting seamless and non-seamless payment flows for domestic and international transactions using scalable backend architecture.
- Decomposed monolithic services into modular backend components, improving system stability and throughput by 39%.
- Implemented security controls including data encryption, secure authentication, role-based access control, request signature verification, and API security standards.
- Conducted query profiling, performance tuning, and root cause analysis, resulting in a 17% improvement in efficiency and reliability.
- Participated in code reviews, design discussions, and documentation to improve code quality, maintainability, and adherence to best practices.

Software Engineer (PHP) Jan '19 — Apr '22
wServe | AGP Technology Pvt Ltd Gurugram, India

- Delivered 100+ CMS and web applications using Core PHP, Laravel, MySQL, JavaScript, and REST APIs, handling full-stack development and backend logic.
- Built reusable Laravel components, traits, and backend dynamic modules, reducing development time by 25% and improving code reusability and consistency.
- Developed admin dashboards, backend services, and database-driven modules to support business requirements.

AWARDS

Payment Gateway Standardization Apr '23
Designed a standardized backend integration framework to onboard and manage 25+ domestic and international payment gateways using reusable service components. Reduced integration effort and improved system maintainability while enabling faster and more reliable onboarding of new payment providers.

EDUCATION

Master of Computer Applications (MCA), Maharishi Arvind Institute of Engineering & Technology Jan '13 — Jan '16
Jaipur, India

- Advanced coursework in software engineering, data structures, database management systems, operating systems, and web application development.

Bachelor of Computer Applications (BCA), Siddhi Vinayak College of Science and Higher Education Jan '09 — Jan '12
Alwar, India

- Studied core computer science fundamentals including programming, SQL databases, and basic web technologies.

PROJECTS

Bigstar, 11Axis Service Link Link

- Designed and developed a scalable **subscription-based SaaS application** using Laravel with a reusable and modular architecture.
- Developed secure REST APIs with authentication, authorization, subscription management, billing workflows, and role-based access control.
- Built reusable components, services, traits, and helper classes following **SOLID principles** and clean code practices.
- Implemented the **Repository-Service Pattern** to separate business logic from data access, improving maintainability and testability.
- Optimized application performance using Redis caching, queues, database indexing, and code refactoring to ensure scalability and reliability.

Accounting System, Payworld Link Link

- Designed and implemented target-based rate and commission models including slab-wise, percentage-based, and rule-driven pricing engines.
- Developed advance funding, wallet adjustment, settlement, and reconciliation workflows ensuring accurate balance management and audit tracking.
- Built scalable commission calculation engines capable of handling high-volume transactions with optimized performance and data integrity.
- Implemented secure accounting REST APIs for rates, invoices, transactions, and reporting with optimized database queries and validations.

Paytring Orchestration Platform, Paytring Link Link

- Designed Core PHP SDK using OOP and design patterns for multi-provider payment orchestration, handling refunds, payouts, subscriptions, multi-currency, and multilingual features.
- Integrated 25+ domestic and international payment gateways following secure and scalable backend design principles.
- Implemented advanced security and fraud prevention mechanisms, reducing fraudulent activities by 25% and improving system reliability.

Webfront, Mcsam Link Link

- Developed backend services and APIs for dynamic payment links and forms, improving payment processing efficiency by 30%.

Emily's Bridal Boutique Link

- Developed a custom eCommerce platform with backend product management, order processing, checkout workflows, and admin dashboards.

Rio De Oro Jewelry Link

- Designed and developed secure backend systems for high-value product inventory, order management, and pricing control.
